

FireMaster[®] Marine Plus Blanket

Product Data Sheet

Product Description

FireMaster Marine Plus Blanket is a highly insulating blanket especially developed for passive fire protection applications that are space or weight sensitive.

Using Morgan's patented Superwool, low-shot technology manufacturing, FireMaster Marine Plus Blanket features an ultra-low-shot blanket, improving handleability and optimising thermal and physical properties. As a result of this technology, **FireMaster Marine Plus Blanket provides typical savings of 20% to 30% in applied weight.**

FireMaster Marine Plus Blanket is a low density blanket with high handling strength, allowing easy and convenient installation. No binder is used during manufacture; therefore, no smoke is emitted in a fire.

FireMaster Marine Plus Blanket is comprehensively tested and approved for the fire protection of the marine industry's steel, aluminium, and composite structures. Offering substantial weight savings over traditionally-used fibre insulation systems, FireMaster Marine Plus Blanket is suitable for use where fire insulation performance is required in the offshore, petrochemical and construction industries.

A range of thicknesses, densities and aluminium foil or glass cloth facings are available.

Fire Reaction Properties

- Non-Combustible in accordance with IMO FTP Code Part 1
- Toxicity Index < 0.5 when tested in accordance with UK MOD Defence Standard 02-713

Properties

- Classification Temperature, °C (°F): 1200 (2192)
- Thickness, mm: 6 to 65
- Density, kg/m³: 48 to 128

Thermal Insulation Performance

Thermal insulation at ambient temperatures

- R Values (m² K/W) and corresponding U values (w/m²•k)
- For densities above 64kg/m³ the values for 64kg/m³ may be used

Environmental & Health Safety

Superwool low biopersistent fibres manufactured by Morgan Advanced Materials are not classified as carcinogenic by IARC or under any national regulations on a global basis. They have no requirements for warning labels under GHS (Globally Harmonised System for the classification and labelling of chemicals).

In Europe, Superwool fibres meet the requirements specified under Note Q of European Regulation EC/1272/2008 (on Classification, Labelling and Packaging of substances and mixtures). All Morgan Advanced Materials Superwool low biopersistent fibre products are therefore exonerated from classification and labelling as hazardous in Europe.
